## e-BRIDGE Next

### Brochure

---

- > Advanced technology combined with exceptional ease-of-use across a range of multifunctional systems.
- > Designed for modern businesses that require impeccable performance.
- > Customisable user interface to suit individual needs and set up tailor-made workflows.

TOGETHER  
INFORMATION

# CONNECT. INTEGRATE. SIMPLIFY. AND MORE.

Technology for every workplace delivering advanced functionality, ease of use and peace of mind.

Every business is unique. That's why Toshiba offers the latest customisable solutions that can be tailored to meet your needs. Toshiba solutions help you simplify complex tasks while managing diverse information – efficiently and safely to maximise your productivity.

Toshiba's latest series delivers on our promise of Together Information – our commitment to collaborate with clients to provide tailored, cost-effective solutions that meet your print, document management and content needs while helping you to meet your green objectives.

## KEY HIGHLIGHTS

- Ultimate user experience
- Industry-leading security standards
- Customisable user interface
- Extensive range of apps, cloud and mobile print functions
- Advanced administration features

# AS UNIQUE AS YOUR BUSINESS

## The right choice for everyone

No two businesses are alike. Each one has unique requirements and demands. Toshiba has innovative technologies to ensure that our multifunction printers (MFP) easily adapt to your individual needs and requirements.

We have developed our technology further to provide you with the flexibility you require to connect and integrate the system into your IT environment and to simplify your workflows. Besides built-in customisation options our team of highly-qualified experts can turn complex and time-consuming workflows into a simple one-touch action. Your benefit: all it will take to start complex processes is a simple touch of a button.

No matter whether you are a small start-up or a multi-national corporation – our e-BRIDGE Next technology is designed to focus on what is important to you.

# WORKFLOW CUSTOMISATION

## Your business – your rules

No one knows your business and processes better than you and that's why the e-BRIDGE Next technology follows your rules. The seamless integration into your existing IT infrastructure and document workflows ensures everything runs smoothly - right from the start.

## Scan workflows

Toshiba MFPs bridge the gap between your paper and electronic documents. The e-BRIDGE Next platform was designed to seamlessly communicate with applications and cloud services to support automated document workflows. It also lets you create Secure PDFs and files which are PDF/A-2 compliant, supporting your long-term archiving needs.

## Fast – Faster – 240 ipm

All systems deliver impeccable document quality. To combine high-quality with high-volume you can use the high-speed Dual Scan Document Feeder (DSDF)<sup>1)</sup>. With an impressive capacity of 300-sheets of double-sided documents and a maximum scan speed of up to 240 images per minute the DSDF will boost your productivity.

<sup>1)</sup> Availability of DSDF varies from model to model.

The optional embedded OCR feature adds to the already extensive list of functionalities the new Toshiba systems have to offer. By easily converting hard-copies into editable and/or searchable documents, intelligent document management is taken a step further.

The advanced preview function on the MFP allows you to easily edit your scan jobs before saving or sending: rotate the images, change the order of pages or even delete individual pages. This preview is also available for the fax function, letting you decide if and which incoming pages should be printed.

## Print workflows

Packed with state-of-the-art technology the e-BRIDGE Next models offer many print features as standard to simplify print workflows. One example is the possibility to send print data from your ERP system (e.g. SAP) directly to the MFP. The raw data, such as PCL barcode sequences, is automatically processed and printed without the need of additional middleware.

To give your users more flexibility or to enforce access security the e-BRIDGE Next technology can easily integrate into pull-printing solutions, such as e-FOLLOW or PaperCut. For a serverless pull-printing solution Toshiba's optional Multi Station Print is the right choice. It allows you to spontaneously decide from which device you want to collect your documents. Simply go to any of the up to 50 connected systems, authenticate and print where it suits you best – all without the need of investing in and maintaining a dedicated server.

## Device management

Thanks to the unified e-BRIDGE architecture, managing our systems is hassle-free. Toshiba's advanced technology ensures easy integration and administration of all e-BRIDGE devices in your fleet. Deployment of settings and updates to all MFPs, automatic metre readings and easy reporting on performance can be done remotely via applications such as e-BRIDGE CloudConnect or TopAccess. Of course, you can schedule the tasks to run outside of office hours to ensure the company's overall productivity is not affected.

Toshiba's e-BRIDGE CloudConnect is a remote management tool which not only maximises the uptime of your devices, but also reduces your IT workload. Automatic metre readings and toner alerts which can trigger automatic supplies delivery, free your employees' time to focus on more important tasks.

### Cloud and mobile printing

In today's business world it is you who decides how you want to print, how you want to share information and where you want to store it. The optional e-BRIDGE Plus apps give you direct access to the most popular cloud services and let you scan your documents to or print from the service of your choice via the MFP.

Mobile printing is important and Toshiba's new systems give you full flexibility to do so. All e-BRIDGE Next models can easily connect to mobile devices via AirPrint (iOS/macOS), Google Cloud Print or the Mopria Print Service (Android).

A single optional module for both wireless LAN and Bluetooth allows fast and easy transmission of data from mobile devices to the MFP. The Wi-Fi Direct feature offers the possibility of on-demand connection. Add to this the Toshiba e-BRIDGE Print & Capture app and you get even more flexibility as it not only lets you print from but also scan to your mobile device.

### Embedded Apps

Each company has different ways of storing and sharing data. Therefore, all e-BRIDGE Next systems can be equipped with apps<sup>1)</sup> to enhance your efficiency. Just choose the ones you need to customise your MFP and meet your individual requirements or preferences. Whether you wish to connect to cloud services or local applications, we have the solution. To ensure you have the perfect fit, our team of software developers can even create customised apps for you.

#### Cloud solution apps

- > e-BRIDGE Plus for Box
- > e-BRIDGE Plus for Dropbox
- > e-BRIDGE Plus for Google Cloud Print
- > e-BRIDGE Plus for Google Drive
- > e-BRIDGE Plus for OneDrive
- > e-BRIDGE Plus for OneDrive for Business<sup>2)</sup>
- > e-BRIDGE Plus for SharePoint Online<sup>2)</sup>
- > e-BRIDGE Plus for Exchange Online<sup>2)</sup>

#### Workflow solution apps

- > e-BRIDGE Plus for Barcode Scan
- > e-BRIDGE Plus for USB Storage
- > e-BRIDGE Plus for Green Information

<sup>1)</sup> Availability of apps may vary from country to country.  
<sup>2)</sup> A Microsoft Office 365 service.

Toshiba offers a range of apps which work with all e-BRIDGE Next MFP systems. One of these is the e-BRIDGE Plus for Green Information app. This tool is an easy way to visualise your green efforts such as duplex printing and N-in-1 on e-BRIDGE Next models or how many pages have been re-used via the unique Toshiba Hybrid MFP. It collects the information from up to ten different devices within your network and displays it as graphs on the control panel. If needed, you can also export the data.

# DESIGN CUSTOMISATION

## A unique user experience

State-of-the-art technology has to be easy to use. Based on this fundamental idea Toshiba has designed e-BRIDGE Next to ensure you can interact intuitively with your multifunction system. And what easier way could there be than via a 26 cm (10.1"), tablet-style multi-touch screen which is fully customisable?

## Customisable interface

Customising a user interface not only has something to do with personal preferences, but also with efficiency. While changing the background colour and re-sizing the icons may seem like just a nice-to-have, this can actually have a positive impact on the user experience. Frequently used features can be found faster and less mistakes are made when operating the systems, increasing the overall productivity.

Operating and customising the e-BRIDGE Next touch panel is just as straightforward as using a mobile device. You can swipe through the menu and also pinch and zoom into documents in the real-time preview. Selecting one of the pre-defined colour schemes and changing the background images is just as easy as rearranging icons, changing their size or even deleting icons you do not need.

## Do more, more easily

The most common features can be presented in a "simple view". This means all elementary settings e.g. for copy or scan are available on one screen for faster execution. For more complex jobs, the "advanced view" will allow you to adjust all settings or start more sophisticated document workflows. Irrespective of which view you select, you can determine which features and settings should be shown and remove the ones you don't need.

To help you find the optimised settings or to turn complex workflows into one-touch operations, please contact your local Toshiba partner. A team of software developers can customise your MFPs on demand.

A large 10.1" touch screen is your gate to document handling. Size and order of icons as well as the background image can be customised.

Customised to display up to 18 icons per page and with a different background

The "simple scan" view for faster execution and fewer mistakes.

Easy access to customised document workflows.

# SMART SECURITY

## Protecting your data

With information being one of the most valuable assets of a company, it is natural for businesses to be concerned about data breaches. And with the General Data Protection Regulation (GDPR) in force, protecting private data is more important than ever. Toshiba offers various possibilities of securing your data and documents to help your business meet the increasing digital challenges of today's world. These security measures can be grouped into the following three categories:

- > Access Security
  - e.g. Role-based access, Card authentication<sup>1)</sup>, NFC authentication<sup>1)</sup>
- > Document Security
  - e.g. Secure PDF, Private print, Hard copy security<sup>1)</sup>
- > Device Security
  - e.g. Toshiba Secure HDD, SSL encryption, IP filtering, IPSec network protocol<sup>1)</sup>

## What is GDPR?

The EU General Data Protection Regulation (GDPR) is binding for all organisations, companies and institutions processing personal data of people living in the European Union. It regulates the data collecting and processing of personal data and information about EU residents. Not complying with the regulation can result in severe fines.

For more information on GDPR and how our products help protect personal data please contact your local Toshiba partner.

## Full control

Various authentication features give you full control over who has access to your documents and devices. This way you can protect your business critical data and make sure that what is yours, stays yours.

To streamline the user login process, you can install the optional card readers. All it takes to authenticate a user is a swipe of an ID card to immediately access the individual functions and documents. If you want, you can even install card readers which are ready to support NFC authentication. Alternatively, you can set up passwords or PIN code for each user to grant personalised access to the systems.

## Safe as safe can be

All e-BRIDGE Next models fulfil the highest security standards to protect your data from unwanted access. So whether you are looking for document security, device security or access security - our new systems have it all.

For all e-BRIDGE Next models you can choose between the Toshiba Secure HDD or the FIPS HDD. Of course, neither of them compromise on the efficiency and performance of the systems:

- > The Toshiba Secure HDD, which is a standard feature, works with a 256-bit AES encryption in real-time. Furthermore, the HDD knows which device it has been built into and will only share information with that device. If the HDD is removed and connected to another MFP or PC, data on the HDD is rendered inaccessible – guaranteeing that your data is safe.
- > The optional, self-encrypting FIPS HDD is a Toshiba Secure HDD which has been certified according to the Federal Information Processing Standard 140-2 regulation. This certification is mandatory for governments and institutions and ensures the systems meet the strictest security standards.

There are various other ways of controlling who can access what is on your Toshiba MFP. By making full use of these possibilities you ensure that your confidential data and information is only available to authorised users. For a detailed list of safety and security features and to learn how you can utilise our software solutions to protect your data, please contact your local Toshiba partner.

## About Toshiba Tec

Toshiba Tec Germany Imaging Systems GmbH is part of the globally operating Toshiba Tec Corporation, active in various high-tech industrial sectors.

Toshiba Tec Corporation is a leading provider of information technology, operating across multiple industries - ranging from retail, education and business services to hospitality and manufacturing. With headquarters in Japan and over 80 subsidiaries worldwide, Toshiba Tec Corporation helps organisations transform the way they create, record, share, manage and display information.
